

Home Filming Tips

Camera

- Please use the camera app on your phone for filming
- Do not use any filters while filming
- Place phone in a horizontal orientation, not vertical
- If possible, set the camera down at eye level
- Use front facing camera and do your best to look into the camera while speaking

Audio

- If you have wired headphones with a microphone built in, it's a good idea to put them in while recording
- If not, do your best to record in a quiet room, ensuring there is no television, music or talking in the background

Speaking

- Stay relaxed to help you answer clearly and confidently
- No need to nail it on your first try, record as many takes you'd like until you get one you want to use

Lighting

- If possible, stand facing a window to allow for natural light
- Do not stand with a window behind you, since it could darken you in the image
- If you don't have daylight use a household lamp. Set up a lamp 1-2 feet away from your face, next to the camera
